Core Elevator Testing Procedures: The Heart of Your Work

This section outlines the essential tests you will perform. Always refer to the manufacturer's specific guidelines for detailed instructions and acceptable tolerances.

1. Safety Circuit Testing

This is arguably the most critical part of your testing. The

safety circuit is a series of interconnected switches and devices designed to stop the elevator in case of a fault. *

Door Interlock Testing: * **Procedure:** With the elevator stopped and doors partially open, attempt to move the car. The elevator should not move. With the doors fully closed, attempt to open them manually (if the system allows for this under controlled testing). They should remain securely latched. * **LSI Keywords:** Door safety, elevator interlocks, door sensors, elevator door malfunction, door sensor testing.

* **Top-of-Car Inspection Station Test:** * **Procedure:** Access the top of the car and activate the inspection control. Ensure the car moves only under your direct control. Test the up and down movement. * **Hoistway Access Switches**

Test: * **Procedure:** Ensure that when a hoistway access door is opened, the elevator cannot be operated. * **Limit**

Switch Testing: * **Procedure:** Carefully test the terminal limits (overspeed and underspeed) by moving the car towards them under controlled conditions. The elevator should stop safely at the designated limits. * **Emergency**

Stop Button Test: * **Procedure:** From both inside the car and from the top of the car, press the emergency stop button. The elevator should immediately halt all movement.

* **Governor Test:** * **Procedure:** Under controlled conditions, simulate an overspeed condition to ensure the governor trips and activates the safety gears. This is a critical safety test. * **LSI Keywords:** Governor trip, safety

gear activation, overspeed protection, elevator safety brake.

*** Car Door Unintended Opening Test: * Procedure:**

While the car is in motion, attempt to open the car doors.

They should remain securely closed.

These tests focus on the smooth and efficient functioning of the elevator. *** Normal Operation Test: * Procedure:** Call the elevator to each landing and observe its movement.

Note the responsiveness of the call buttons and the door operation. *** LSI Keywords:** Elevator responsiveness, call button functionality, door open/close time.

*** Leveling and Alighting Test: * Procedure:** Observe the elevator's ability to level precisely with each landing. Test the ease of passenger alighting and boarding. *** LSI Keywords:**

Elevator leveling accuracy, floor alignment, passenger access. *** Door Reopen Functionality: * Procedure:** Test the door-reopen sensor (often triggered by a beam of light or a pressure sensor) to ensure it functions correctly when an obstruction is detected. *** Speed and**

Acceleration/Deceleration: * Procedure: Observe the smoothness of the elevator's acceleration and deceleration. Note any jerky movements or unusual noises. *** Emergency**

Return Function Test: * Procedure: If applicable, test the fire service or emergency return feature to ensure the elevator proceeds to a designated floor and opens its doors.

3. Load Testing This verifies the elevator's ability to carry its rated load safely. * **No Load Test:** Perform initial operational checks without any load. * **Partial Load Test:** Introduce partial loads (using test weights) and observe performance. * **Full Load Test:** This is a crucial test. Load the elevator to its maximum rated capacity using certified test weights. Observe the elevator's speed, leveling, and braking performance. * **LSI Keywords:** Elevator load capacity, weight testing, rated load, elevator performance under load.
